

TEST BENCH AND TESTS FOR THE SELECTION OF VACUUM CUPS- BT 01

The device, equipped with 6 vacuum and 2 pneumatic sockets, lets users carry out vacuum or Bernoulli suction cups tests on the objects to be gripped or moved, to aid in correctly choosing gripping cups.

This is a useful tool to have at trade show exhibitions, in a showroom or in a test room, for gripping or handling demonstrations or for technical personnel training dedicated to vacuum technology.

The device is already equipped with its own vacuum generator and only needs to be connected to compressed air and to the electrical power line.

Contact our technical department for further information.

Technical features

Electrical power: Single-phase V230 ± 10% 50/60 Hz

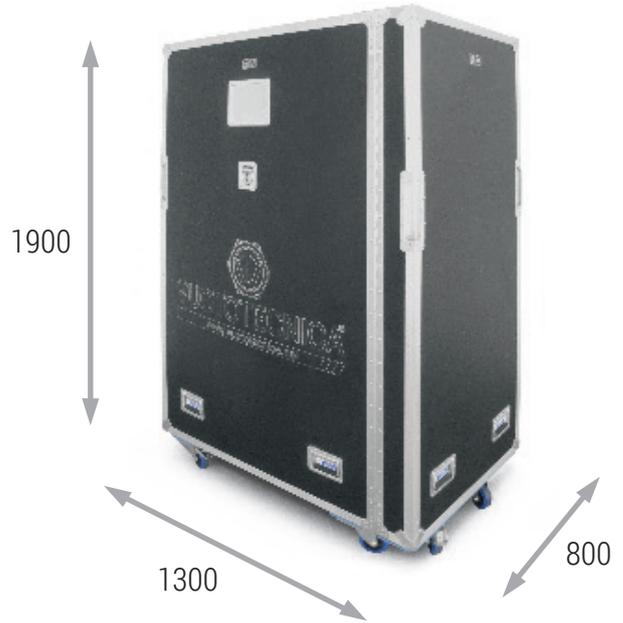

Electric power: 1.5 kw

Compressed air consumption: 390 L/min 2bar

BT01 weight: 115 kg

Flight case 01 weight: 200 kg

Total weight: 315 kg
